# What PlantMaster Pro Is

---

AI maintenance management software, built for Pakistani plant floors.

PlantMaster Pro runs the everyday work of a maintenance department — work orders, preventive maintenance schedules, spares and purchase orders, asset registers, checklists, roster and attendance — and adds an AI layer that has read every equipment manual a plant uploads, so a technician can troubleshoot a real breakdown at 3am without waiting for a senior engineer to answer the phone.

- **Grounded, not generic**

The AI Problem Solver answers from the plant's own uploaded manuals and cites the exact document and page — not a generic internet guess.

- **Built for the plant floor, not an office**

Large buttons, voice input in Urdu and English, and a 20-minute walkthrough is usually all a team needs.

- **Runs on any phone**

No tablets, sensors or IT project required. Condition monitoring uses the microphone already in every technician's pocket.

- **Data stays the customer's**

Isolated per company at the database level. Exportable to Excel, CSV, Word or PDF at any time, no lock-in contract.

# Nineteen Modules. One Subscription.

No paid add-ons and no locked "enterprise" features needed on day one.

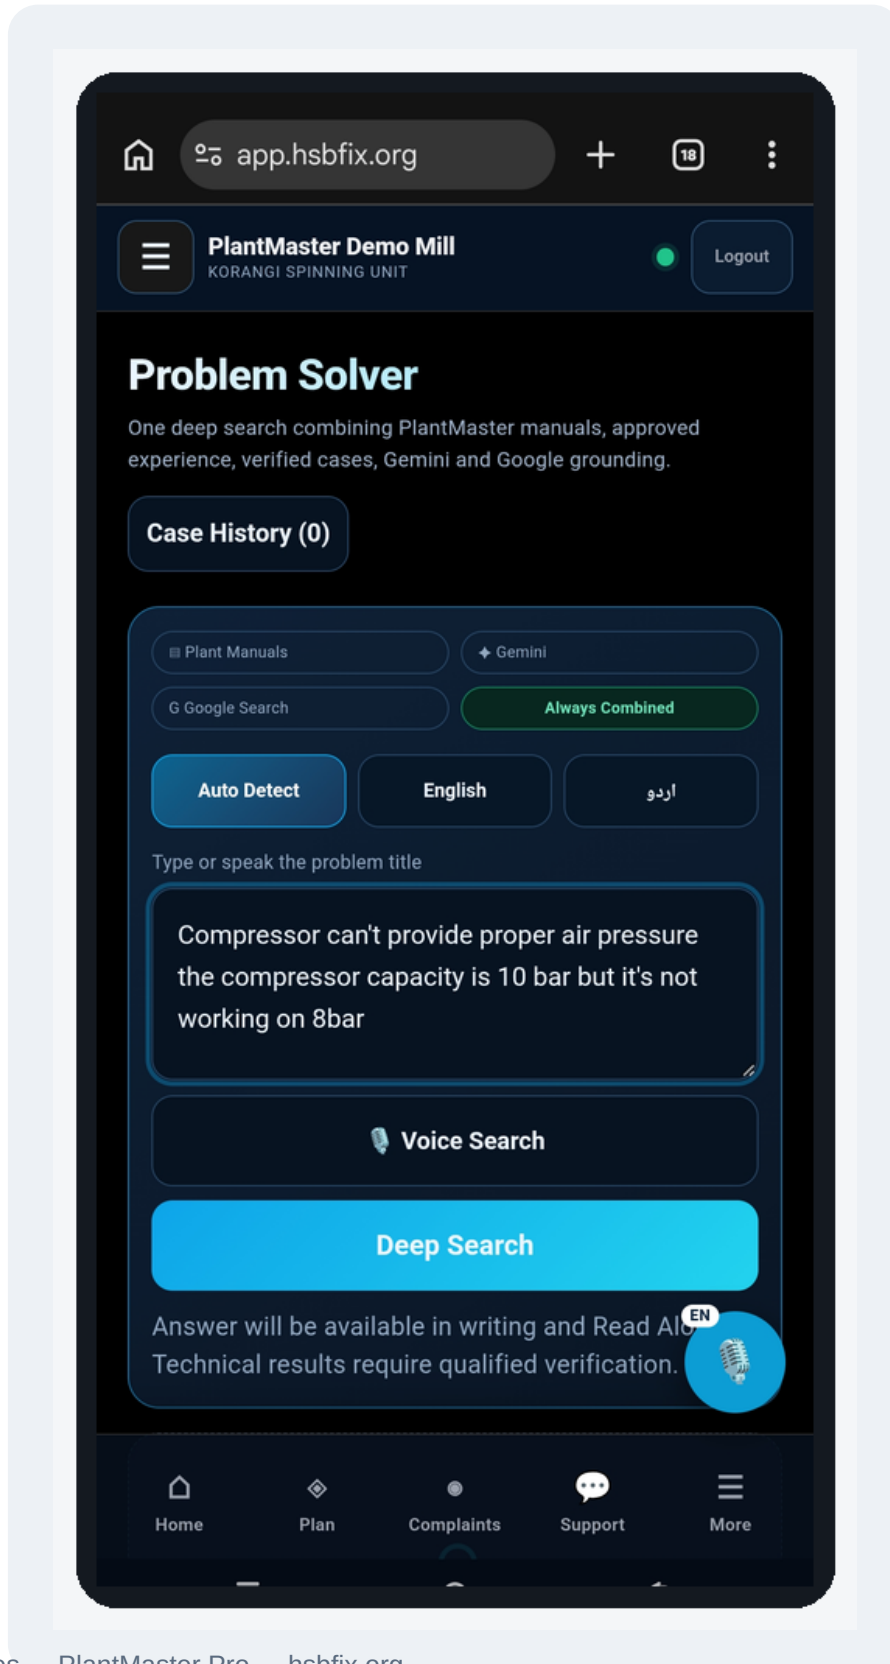

- AI Problem Solver
- Vision Scanner
- Predictive Maintenance
- Preventive Maintenance
- QR Scanning
- Purchase Orders
- Roster & Attendance
- Reports & Analytics
- Support Desk
- Recovery Bin
- AI Deep Search
- Condition Monitoring
- Work Orders
- Asset Register
- Spares & Tools
- Checklists
- Audit Trail
- Manuals & Drawings
- Files & Photos
- Team & Permissions

## Worth doing the maths

Essential keeps good records. Professional stops the failure happening. One prevented breakdown a year — typically Rs 200,000+ in lost production, emergency parts and overtime — pays for the Professional plan several times over.

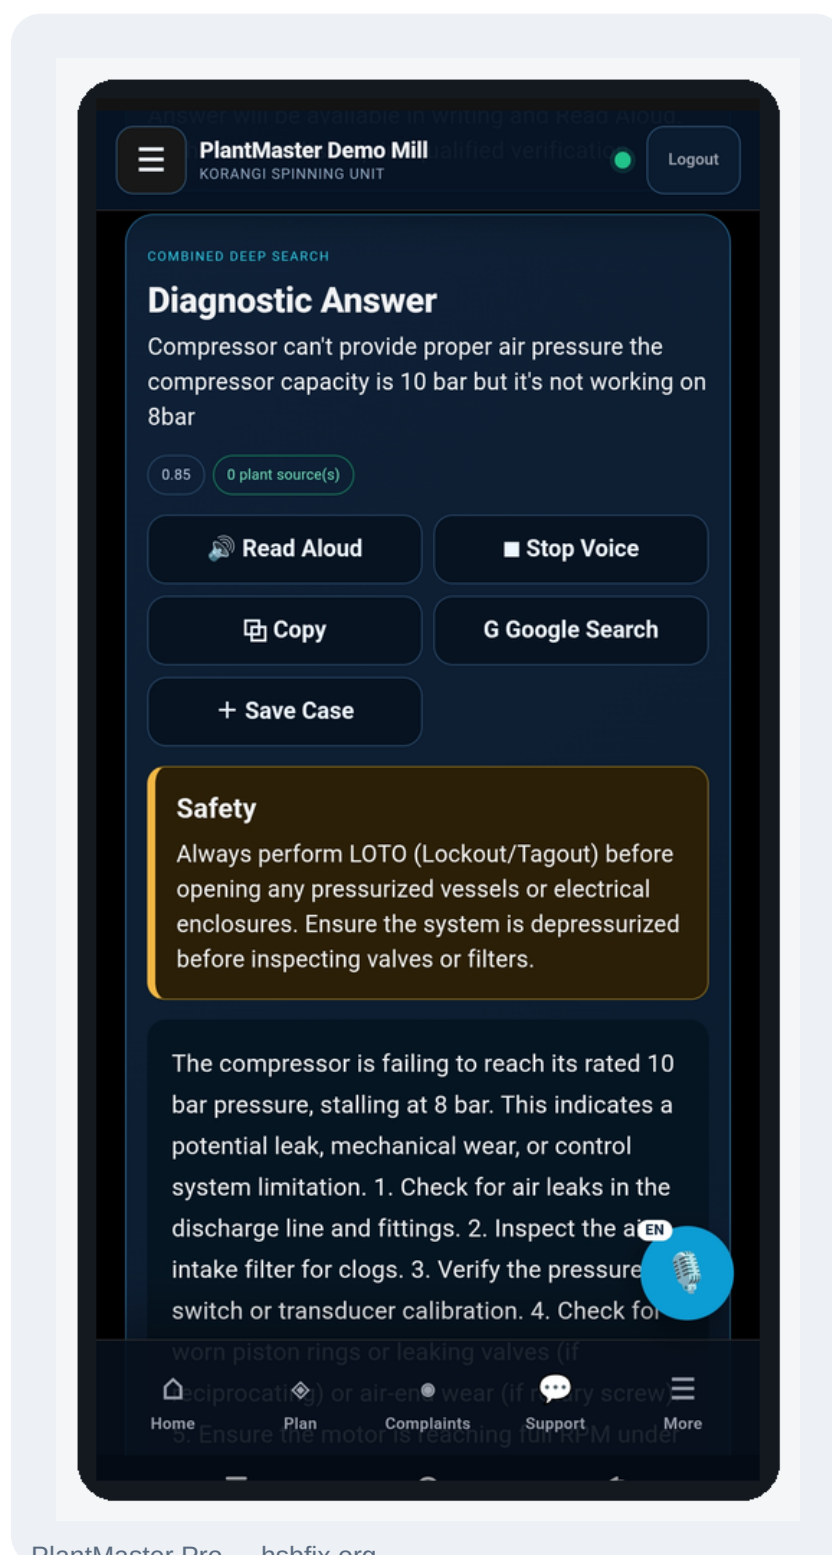

# AI Problem Solver

A technician describes the fault in plain language, in English or Urdu, and runs one combined search across plant manuals, approved experience and verified cases.

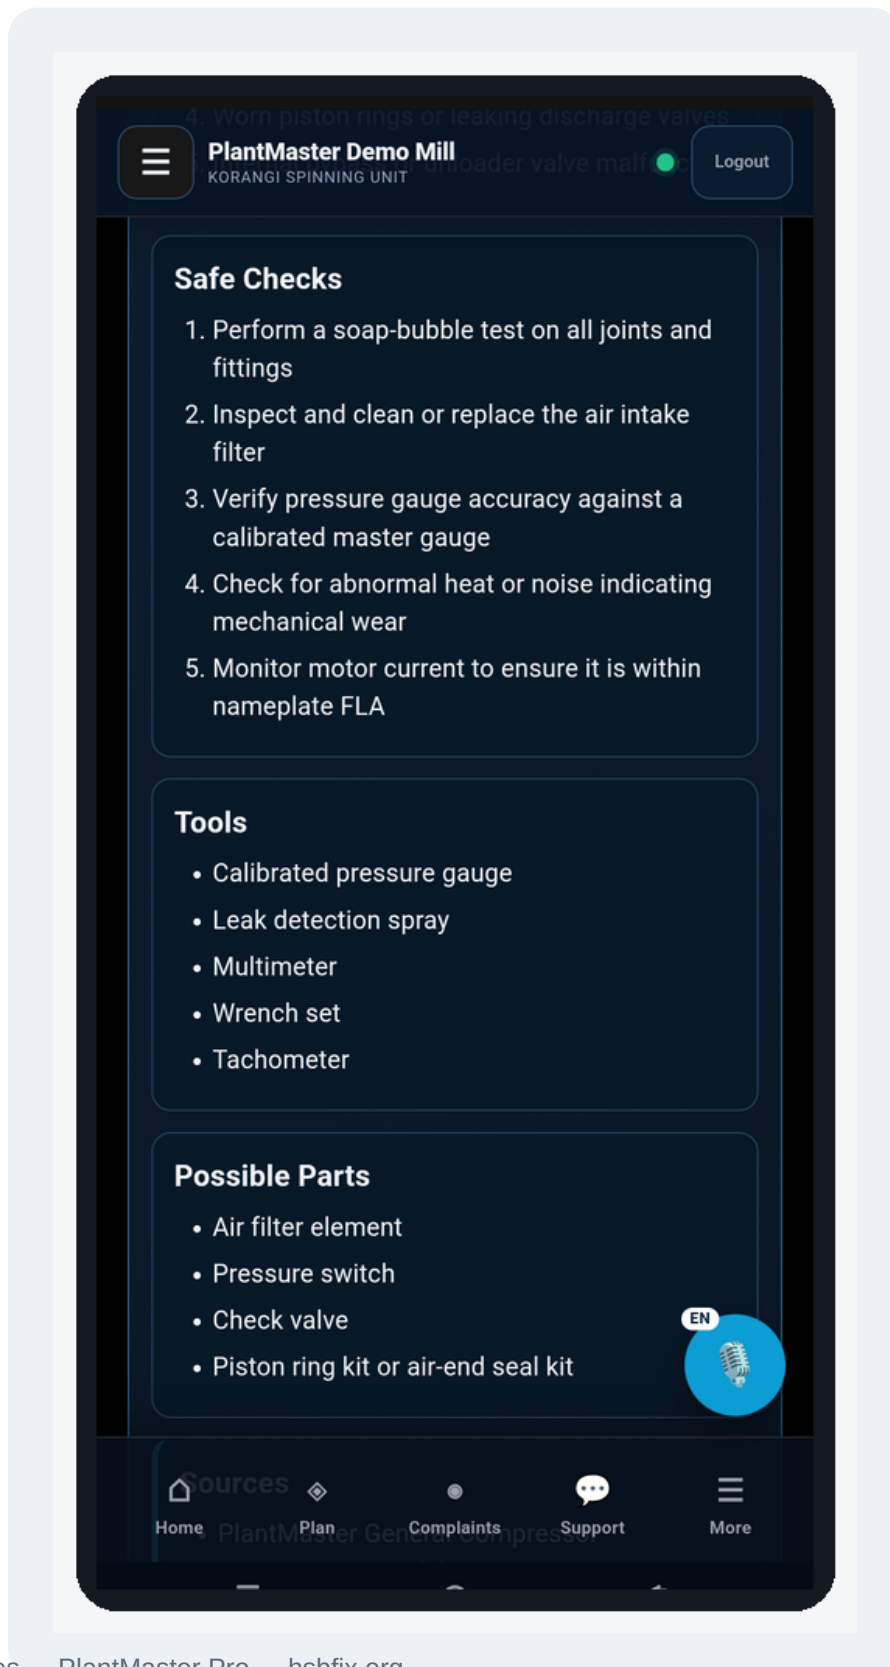

# Diagnostic Answer with Confidence & Sources

Every answer carries a confidence score and the number of plant documents it drew on, so the reader knows whether it came from uploaded manuals or general engineering knowledge.

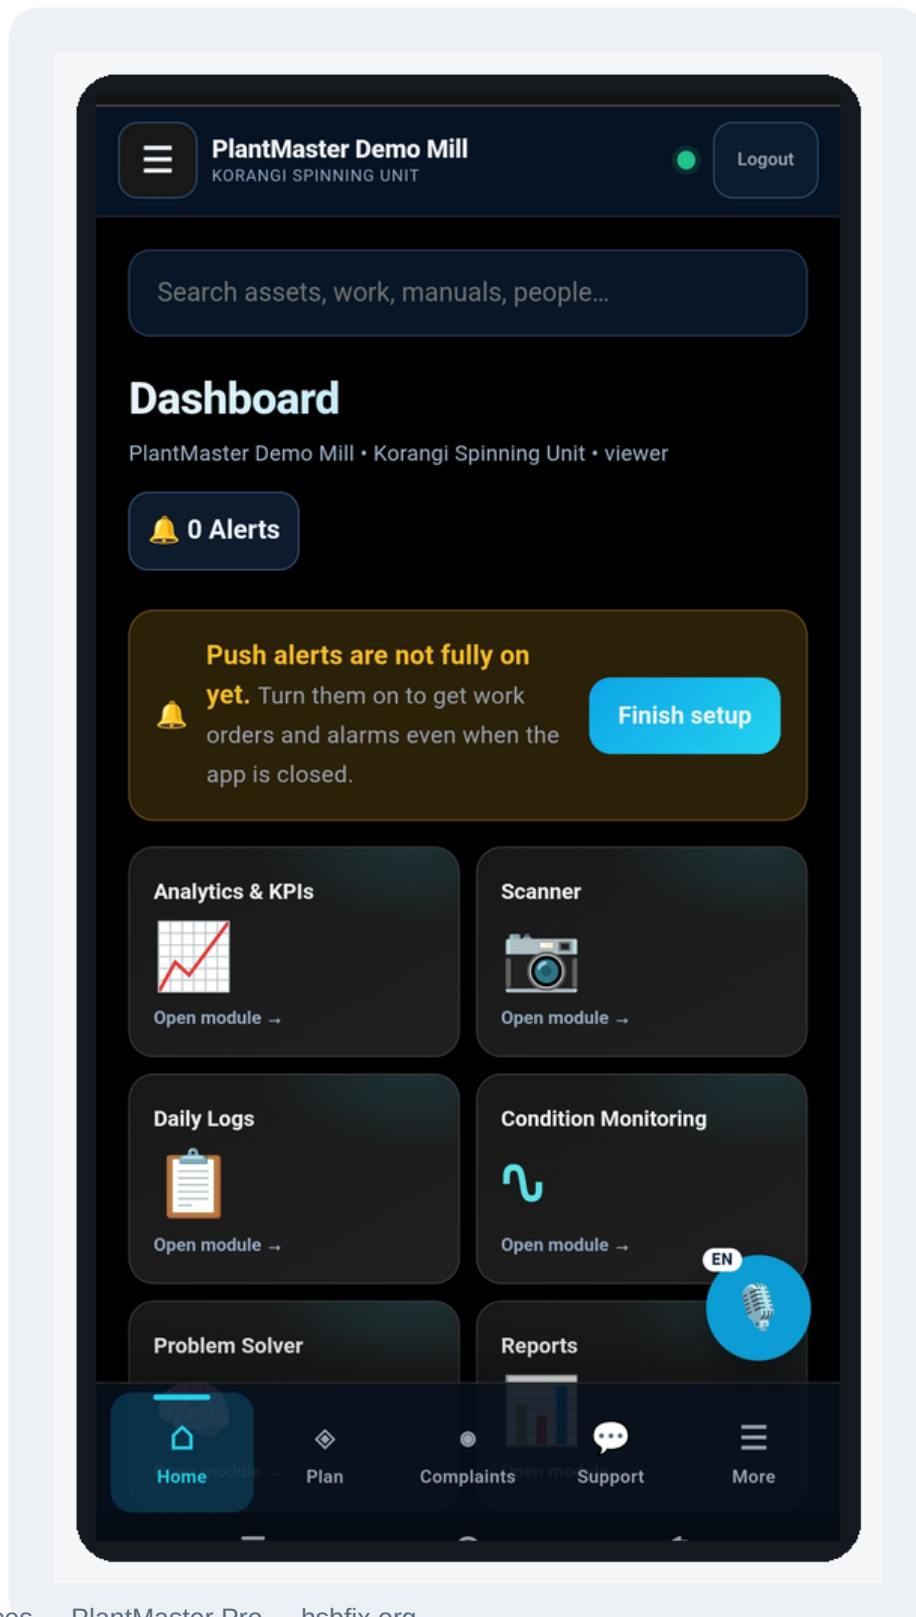

# Ordered Safe Checks, Tools & Parts

Results arrive as a ranked checklist with the tools required and the parts likely to be needed, so the job can be prepared before anyone walks to the machine.

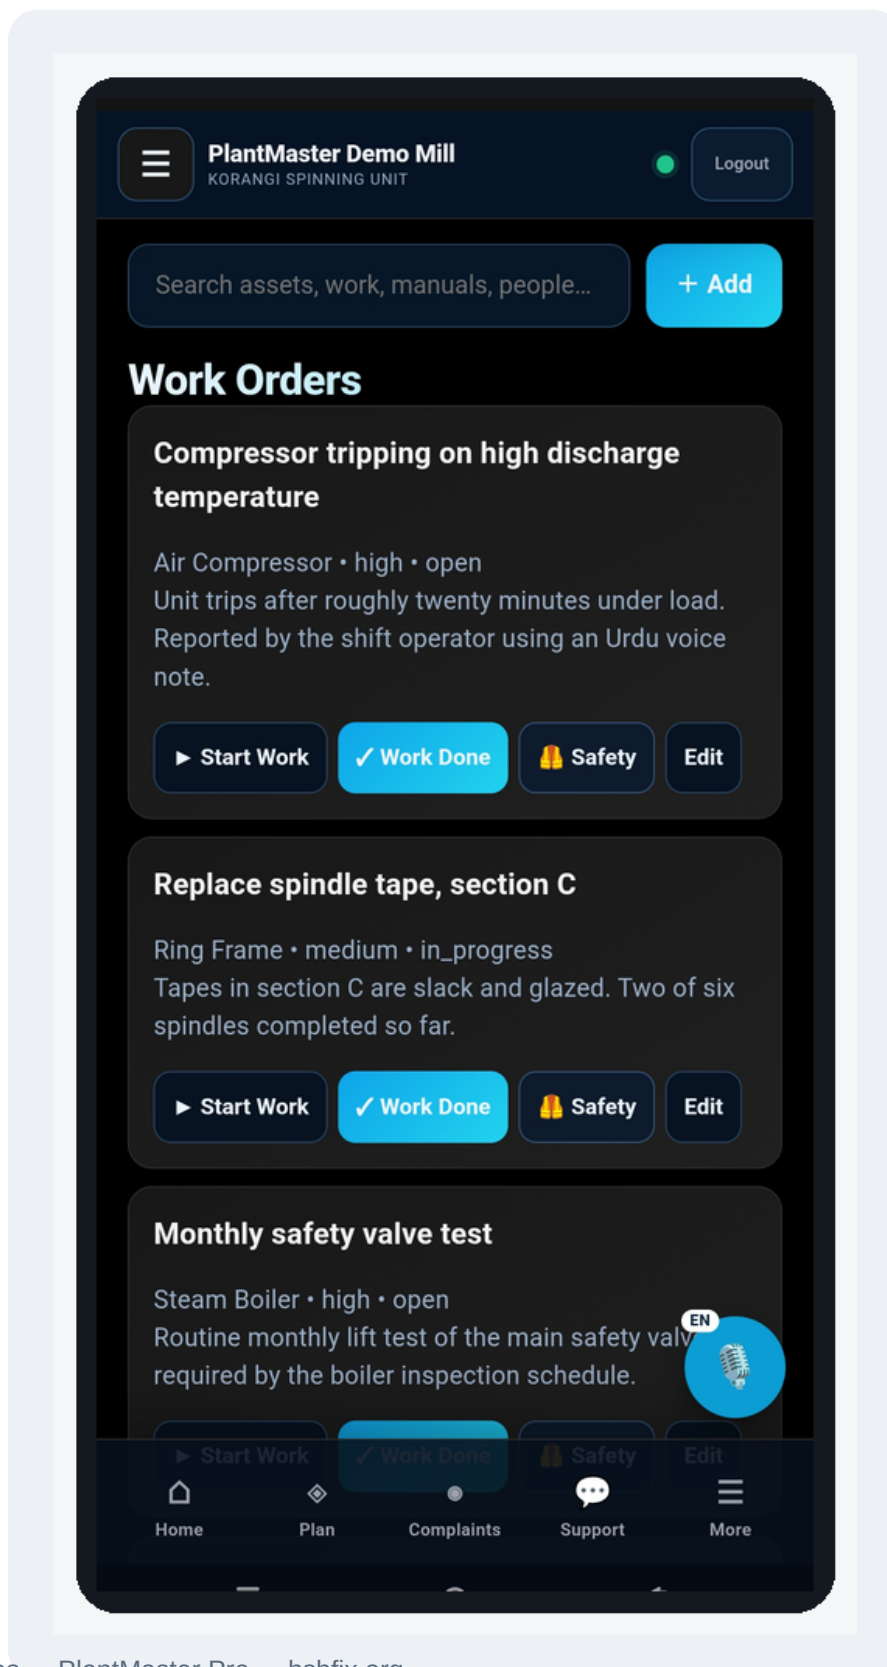

# Module Dashboard

Every module is reachable from one screen: analytics, scanner, daily logs, condition monitoring, problem solver and reports. Built for a phone held on the plant floor.

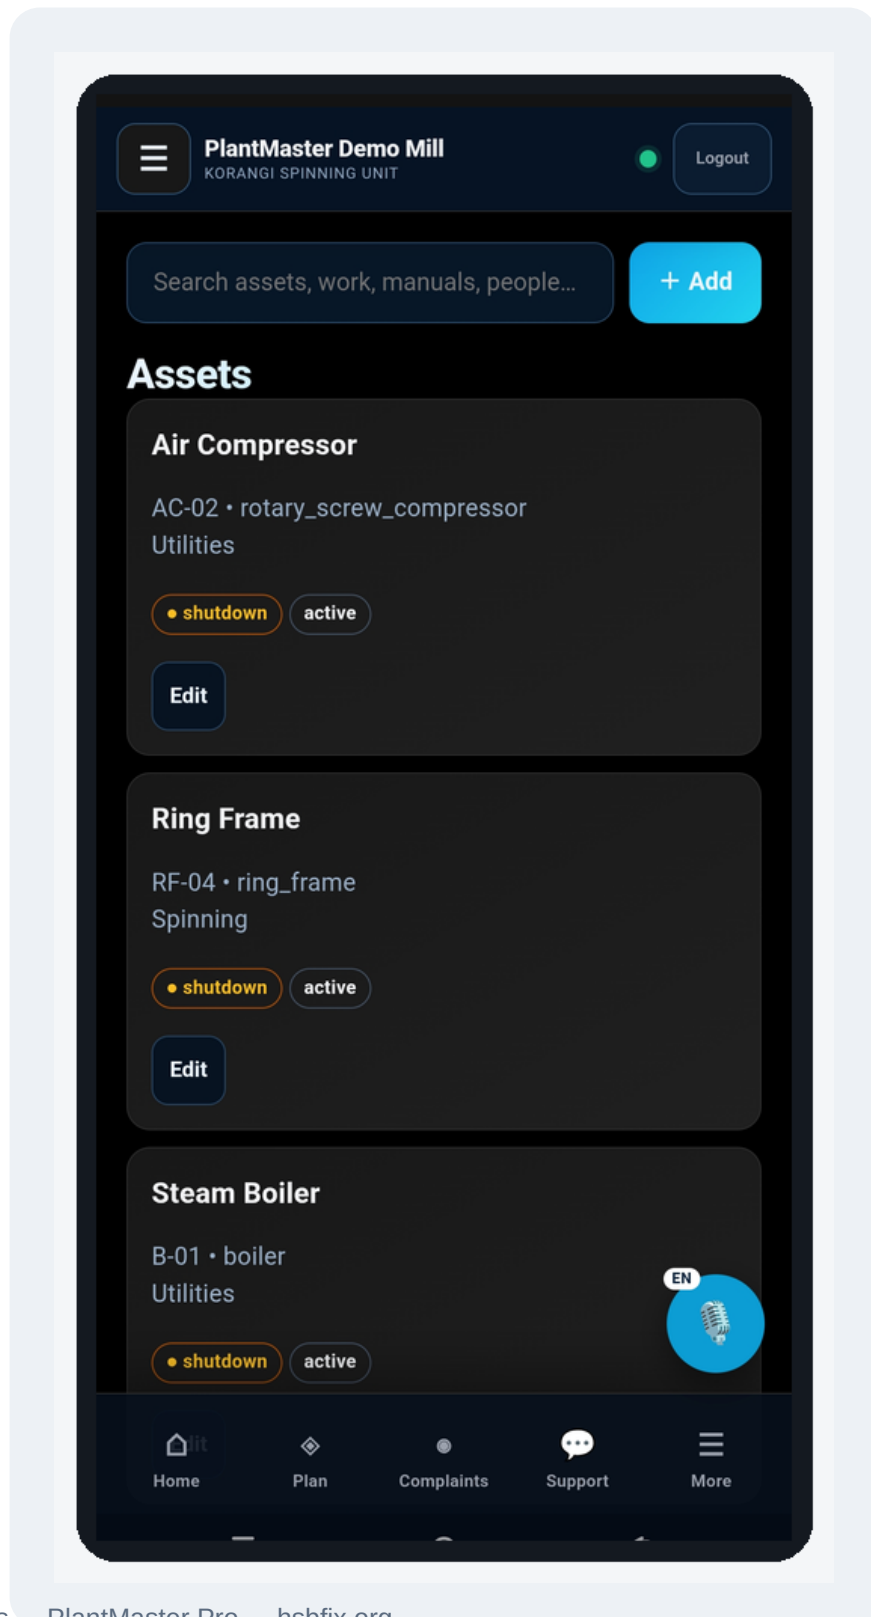

# Work Orders

Each job carries the asset, priority and status, with start and completion recorded against it. Jobs can be raised by a shift operator using an Urdu voice note.

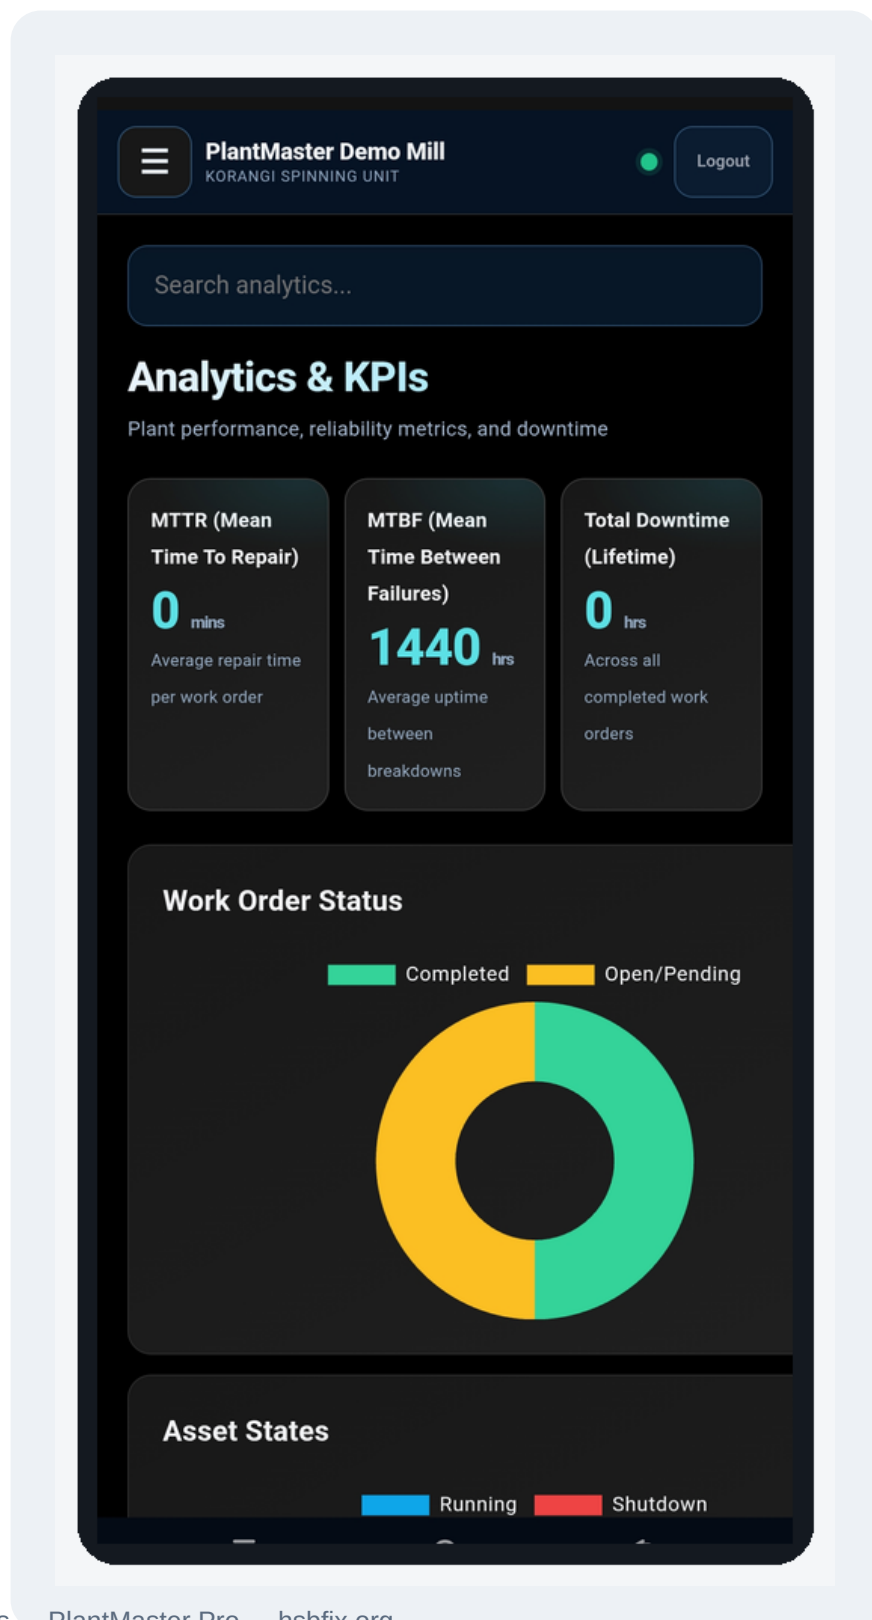

# Asset Register

Equipment is recorded with an asset code, type, department and running state, so history and work orders attach to a specific machine rather than a free-text description.

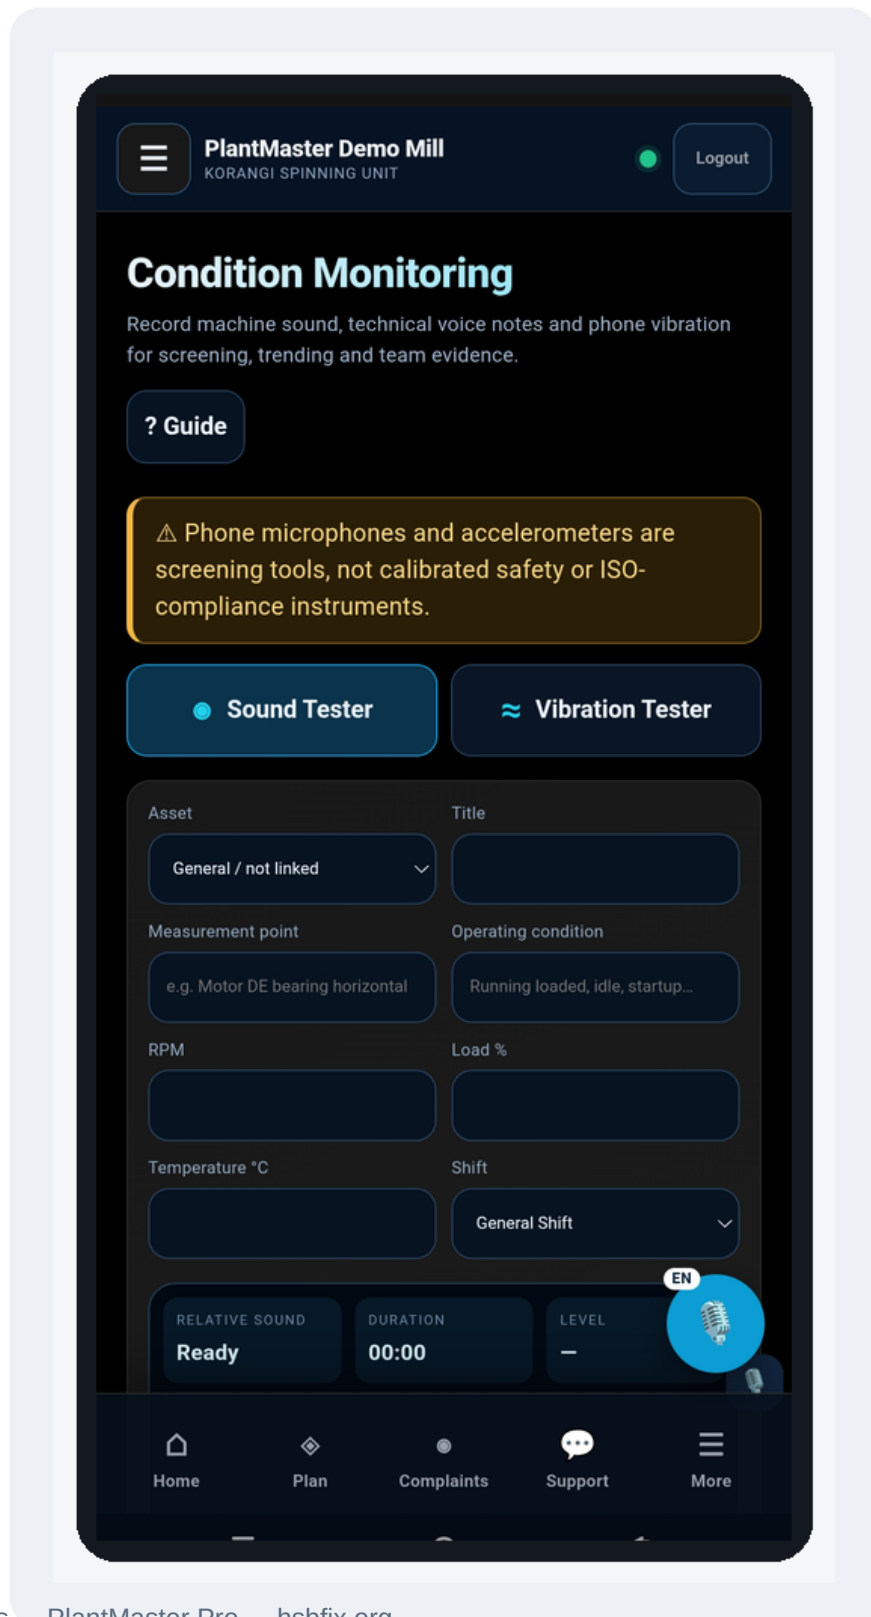

# Reliability Analytics

Mean time to repair, mean time between failures and total downtime are calculated from completed work orders, alongside work order status and asset state breakdowns.

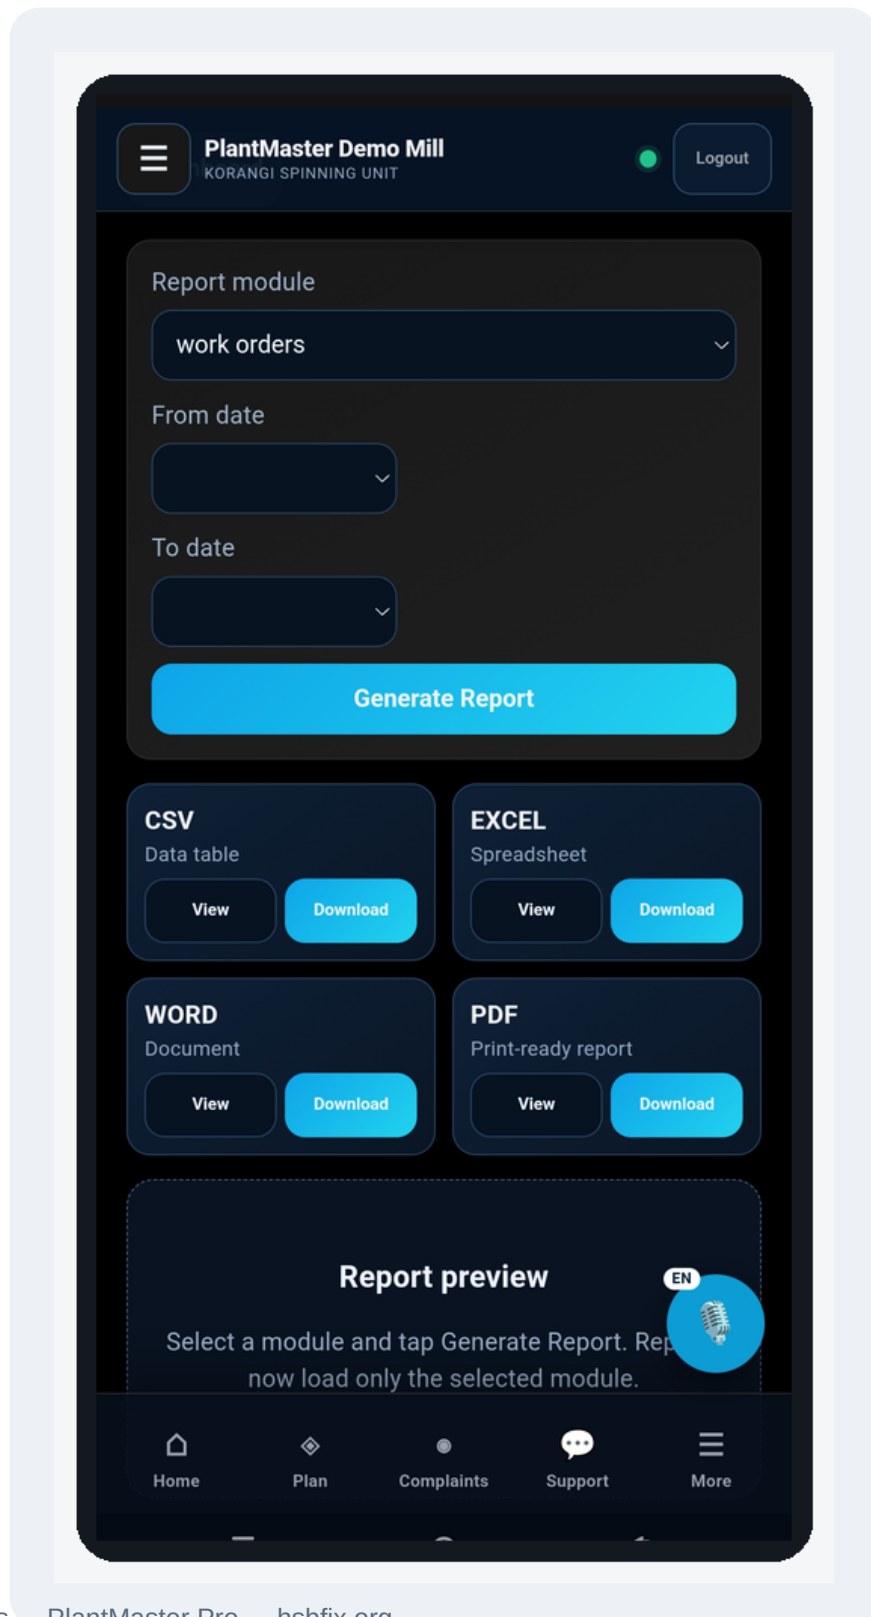

# Condition Monitoring by Phone

A standard smartphone microphone and accelerometer record machine sound and vibration for screening and trending, with operating condition, RPM, load and temperature captured alongside.

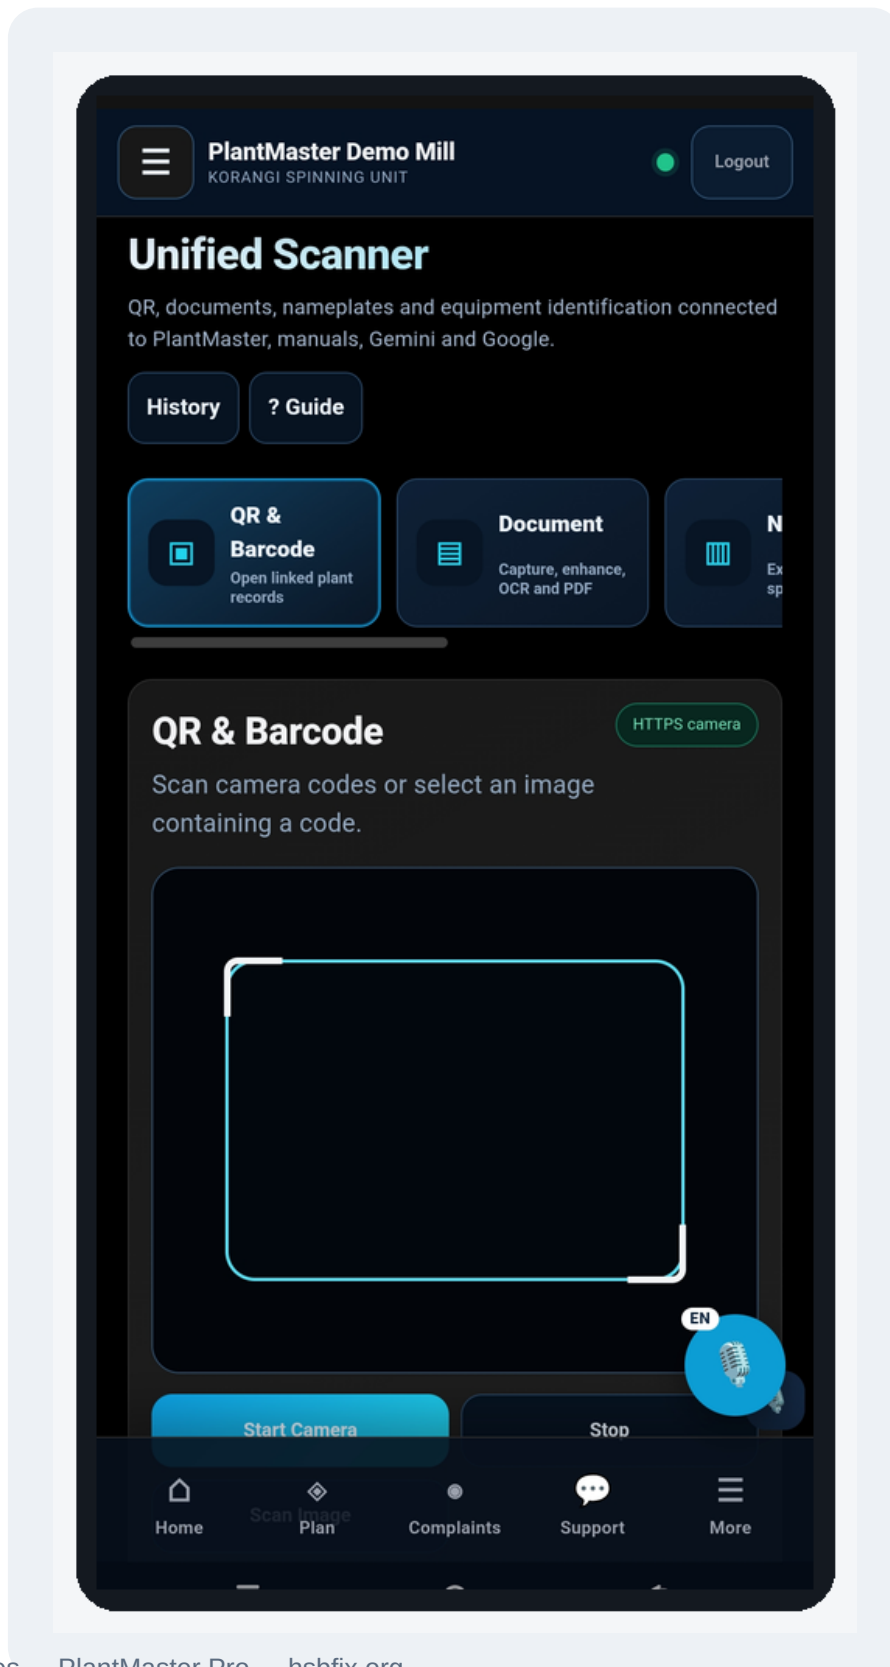

# Report Export

Any module can be exported for a chosen date range as CSV, Excel, Word or PDF, so maintenance records can be handed to auditors or management in the format they ask for.

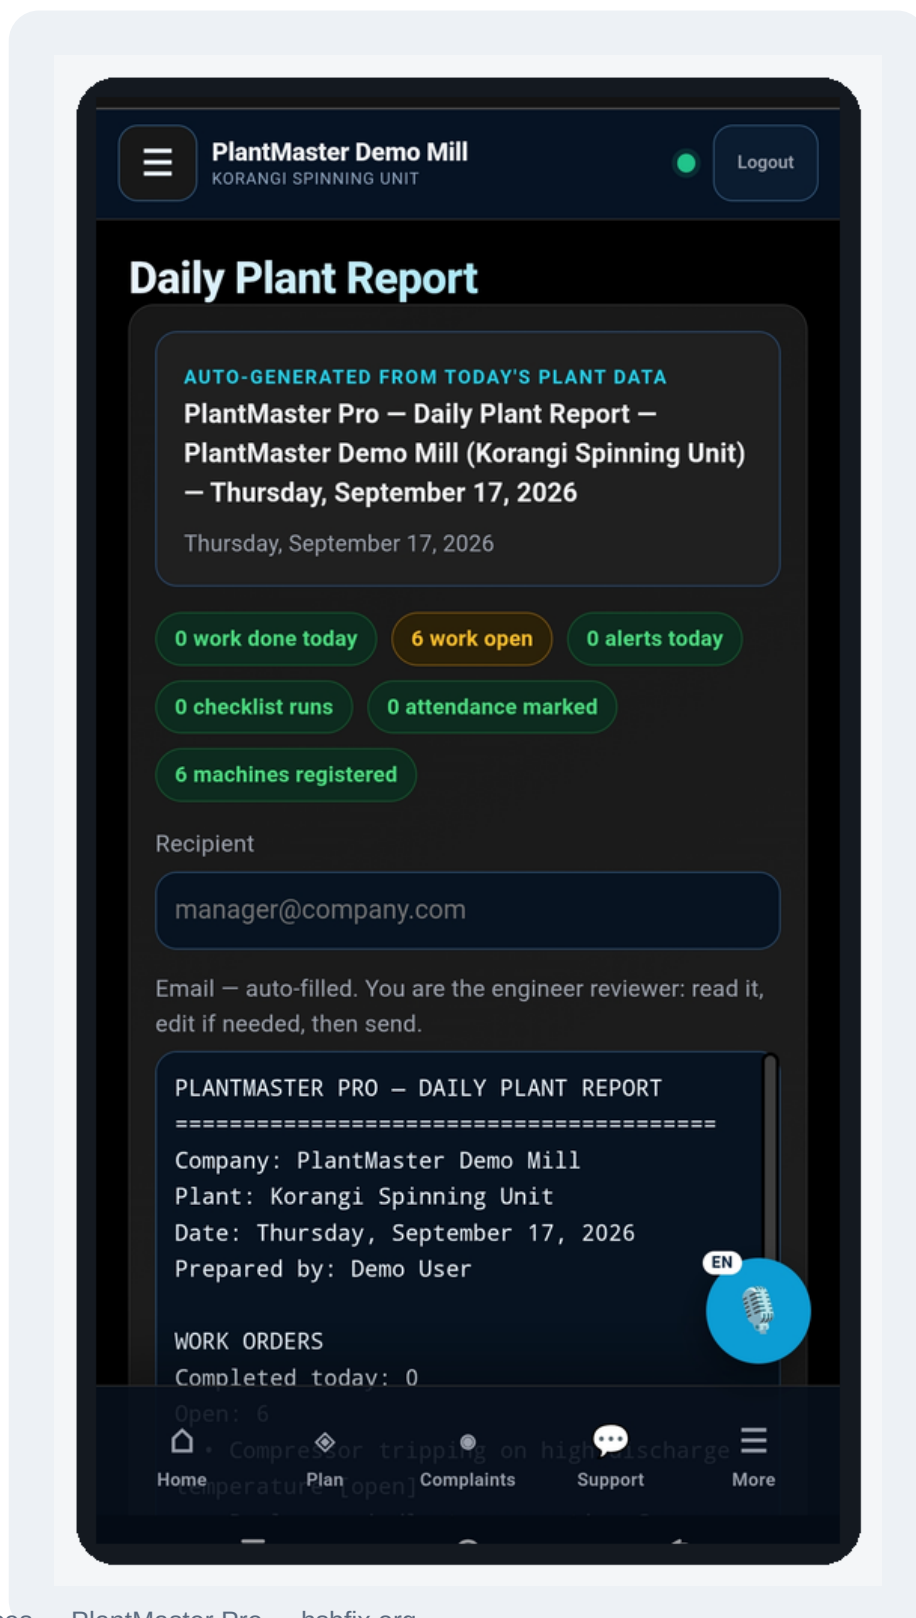

# Unified Scanner

One scanner handles QR codes, barcodes, documents and equipment nameplates, linking a physical machine to its record, its manuals and its work history.

# Automatic Daily Plant Report

A plain-text daily summary is generated from the day's data covering work completed, work open, alerts, checklist runs, attendance and machines registered, for review before sending.

# Pricing

Four plans. Seven days free on any plan — no card, no contract.

*Sample pricing shown for illustration — confirm current rates before sending this document to a client.*
